ITV-202409260028	TRUCK - BODY REPAIR	TK-202409260001	<p>SENTHILMURUGAN RAJENDRANEmail Address: SENTHILMURUGAN.RAJENDRAN@VGRGROUP.MUPhone Mobile: 230 230 230 230 230 230 260Allow Cheque: YESRemarks: Downloads Documentation Get Involved Help PHP 8.4 Search docs Other Changes >>> Backward Incompatible Changes PHP Manual Appendices Migrating from PHP 8.0.x to PHP 8.1.x Change language: English Deprecated Features ¶ PHP Core ¶ Implementing Serializable without serialize() and unserialize() ¶ Either only the new methods should be implemented, if no support for PHP prior to version 7.4 is provided, or both should be implemented. Passing null to non-nullable parameters of built-in functions ¶ Scalar types for built-in functions are nullable by default. This behaviour is deprecated to align with the behaviour of user-defined functions, where scalar types need to be marked as nullable explicitly. Implicit incompatible float to int conversions ¶ The implicit conversion of float to int which leads to a loss in precision is now deprecated. This affects array keys, int type declarations in coercive mode, and operators working on ints. Calling a static element on a trait ¶ Calling a static method, or accessing a static property directly on a trait is deprecated. Static methods and properties should only be accessed on a class using the trait. Returning a non-array from _sleep() ¶ Returning a value which is not an array from _sleep() now generates a diagnostic. Returning by reference from a void function ¶ Such a function is contradictory, and already emits the following E_NOTICE when called. Only variable references should be returned by reference. Autovivification from false ¶ Autovivification is the process of creating a new array when appending to a value. Autovivification is prohibited from scalar values, false however was an exception. This is now deprecated. Note: Autovivification from null and undefined values is still allowed. ctype ¶ Verifying non-string arguments ¶ Passing a non-string argument is deprecated. In the future, the argument will be interpreted as a string instead of an ASCII codepoint. Depending on the intended behavior, the argument should either be cast to string or an explicit call to chr() should be made. All ctype (*) functions are affected. Date ¶ date sunrise() and date sunset() have been deprecated in favor of date_sun_info(). strtotime() has been deprecated. Use date_parse_from_format() instead (for locale-independent parsing), or IntlDateFormatter::parse() (for locale-dependent parsing), strftime() and gmstrftime() have been deprecated. Use date() instead (for locale-independent formatting), or IntlDateFormatter::format() (for locale-dependent formatting). Filter ¶ The FILTER_SANITIZE_STRING and FILTER_SANITIZE_STRIPPED filters are deprecated. The filter.default INI directive is deprecated. GD ¶ The num_points of imagepolygon(), imageopenpolygon() and imagefilledpolygon() has been deprecated. Hash ¶ The mhash(), mhash_keygen_s2k(), mhash_count(), mhash_get_block_size(), and mhash_get_hash_name() have been deprecated. Use the hash_*() functions instead. IMAP ¶ The NIL constant has been deprecated. Use 0 instead. Intl ¶ Calling IntlCalendar::roll() with a bool argument is deprecated. Use 1 and -1 instead of true and false respectively. Multibyte String ¶ Calling mb_check_encoding() without any arguments is deprecated. MySQLi ¶ The mysqli_driver::\$driver version property has been deprecated. It was meaningless and outdated, use PHP_VERSION_ID instead. Calling mysqli_get_client_info() or mysqli_get_client_info() with the mysqli argument has been deprecated. Call mysqli_get_client_info() without any arguments to obtain the version information of the client library. The mysqli::init() method has been deprecated. Replace calls to parent::init() with parent::__construct(), OCI8 ¶ The oci8.old_oci_close_semantics INI directive is deprecated. ODBC ¶ odbc_result_all() has been deprecated. PDO ¶ The PDO::FETCH_SERIALIZE fetch mode has been deprecated. PgSQL ¶ Not passing the connection argument to all pgsql_*() functions has been deprecated. SOAP ¶ The ssl method option of SoapClient::__construct() has been deprecated in favor of SSL stream context options. Standard ¶ Calling key(), current(), next(), prev(), reset(), or end() on objects is deprecated. Either convert the object to an array using get_mangled_object_vars() first, or use the methods provided by a class that implements Iterator, such as ArrayIterator, instead. The auto_detect_line_endings INI directive is deprecated. If necessary, handle "\r" line breaks manually instead. The FILE_BINARY and FILE_TEXT constants have been deprecated. They never had any effect. Found A Problem? Learn How To Improve This Page • Submit a Pull Request • Report a Bug [add a note User Contributed Notes There are no user contributed notes for this page.
